

Image Specifications

When supplying images for use in marketing a show, our preference is for:

- **Landscape format at a ratio close to 3:2** – see notes below.
- **A minimum of 1600 pixels wide, no maximum** – we use show images in slideshows on a large UHD screens in our café, The Hub, to advertise forthcoming productions and also in our brochure which requires a suitable level of quality for print.
- **With no (or minimal) text or logo content wherever possible** - text will be provided beneath each image and in more detail on our booking page.

Minimum 1600 pixels

Any text to be centrally placed to avoid cropping

Notes:

Our website displays show images in a grid with show details beneath. Each image is presented in landscape format at ratio 3:2 – eg. 1800 pixels wide x 1200 pixels tall.

The website is fully 'responsive' and will automatically resize images and/or reduce the number of images per row to fit the device that the customer is using to view.

Phone or Tablet devices may display images at a smaller or larger size to those on a larger PC monitor or laptop. The site automatically crops images that are not 3:2 ratio.

Important: If the image provided is in portrait or square format, the top and bottom will be cropped. If the image provided must include text or a logo this should be centrally placed as any text extending to the edges of the image is likely to get cropped and be unreadable.

We will do our best to ensure that any show images display correctly, promoting the show professionally. We reserve the right to use image editing software to achieve this. If you are uncertain, please contact us and we will do our best to help you produce suitable images.
